FOR EXPERIMENTAL AIRCRAFT

Aircraft Specialty and TS FLIGHTLINES are excited to announce the complete Thermostasis Install Kit for the Rotax 912 Engine.

Our complete kit is designed to be a direct installation in the RV-12 aircraft and is adaptable to any aircraft utilizing the Rotax 912 Engine.

Benefits of this installation include:

1. Greatly reduce warmup times on your engine. Field testing has shown that in conditions of 30 degrees F, warmup times were reduced from 11 minutes to 6 minutes
2. Inflight testing has shown that without this kit, oil temperatures have dropped as low as 122 degrees in a long descent. Under the same ambient conditions, these temperatures were in the 190 degree range.
3. These hoses have NO MANDATORY 5 YEAR HOSE REPLACEMENT – Being Conductive Teflon, these hoses have no maximum rated life. They don't deteriorate like the standard Rotax hoses do, and are also impervious to most fluids.
4. EVERY hose on this kit is pressure tested to ensure strength and conformity. In addition, these hoses are designed to operate under continuous loads of 2,000 psi every day all day long. This ensures an unprecedented safety margin in your aircraft.
5. 10 YEAR INDUSTRY LEADING WARRANTY on your hoses. If you have ANY problems in your first 10 years, we will replace your hose at no charge We are that confident in the quality of this setup.
6. We include a complete instruction manual with step by step installation pictures for installation simplicity. In addition, we are always only an email or phone call away to help support you with any questions you have on your installation.

We are excited to be able to offer this kit at an INCREDIBLE INTRODUCTORY PRICE of \$699.95. Please feel free to contact either of us for more information.
